

SESSION 2

Input & Output

Parent Study Guide — Help Your Child Learn at Home

Ages 6 – 10 | Online Class

Dear Parents,

This study guide covers everything your child learned in Session 2 about computer Input and Output devices. Use it to review the material together, practice with the activities, and reinforce the key concepts. Each section includes simple explanations and fun tips to make learning enjoyable!

What's Inside This Guide

1

Key Concepts

What is Input? What is Output?

2

Input Devices

Keyboard, Mouse, Microphone, Camera & more

3

Output Devices

Monitor, Speakers, Printer & more

4

The Simple Rule

An easy way to remember Input vs Output

5

Practice Activities

Fun exercises to do together at home

6

Homework Tasks

Sort devices & draw your computer setup

1. Key Concepts

How Do We Talk to a Computer?

We send information TO the computer (Input), and the computer sends information BACK to us (Output). It's like a conversation!

INPUT

Sending information TO the computer

- YOU give information TO the computer
- You tell the computer what to do
- The computer LISTENS and receives it

Think of it like talking to a friend! When YOU speak — that is INPUT. You are giving information to someone.

OUTPUT

Receiving information FROM the computer

- The computer gives information TO YOU
- The computer shows or plays its answer
- YOU see, hear, or read the result

Think of it like a friend replying! When THEY speak back — that is OUTPUT. The computer is giving you information.

INPUT

WE tell the computer
Keyboard · Mouse · Mic · Camera

OUTPUT

The computer tells US
Monitor · Speakers · Printer

Easy way to remember: INPUT goes IN to the computer — OUTPUT comes OUT of the computer!

2. Input Devices

These devices send information TO the computer

Keyboard

INPUT

Types letters (A, B, C...), numbers (1, 2, 3...), words and sentences. Has special keys like Enter, Space, and Delete.

Mouse

INPUT

Single click selects items. Double click opens files & programs. Right click shows extra options. Scroll wheel moves up and down.

Microphone

INPUT

Records your voice to the computer. Used in video calls (like Zoom!), voice commands, and making recordings & podcasts.

Camera / Webcam

INPUT

Takes photos and records videos for the computer. Used in video calls to show your face. Can scan documents and QR codes.

More Input Devices You Use at Home!

TV Remote: Press buttons to tell the TV what to show — that's INPUT!

Game Controller: Buttons send your moves to the console — INPUT!

Touch Screen: Your finger tap sends info to the tablet/phone — INPUT!

Voice Commands: "Hey Siri!" or "Alexa!" — your voice is INPUT to a smart device!

Ø=Ü; Any time YOU send information to a machine — that is INPUT. The machine listens to you!

3. Output Devices

These devices receive information FROM the computer and show/play it for you

Monitor / Screen

OUTPUT

Shows pictures, photos, videos, movies, games, and text on screen. Everything you SEE comes from the monitor.

Speakers

OUTPUT

Plays music, songs, game sounds, and lets you hear people talk in video calls. Everything you HEAR comes from speakers.

Printer

OUTPUT

Prints documents, homework, photos, and pictures on paper. Turns computer information into physical pages you can hold.

More Output Devices You Use at Home!

Headphones: Sound comes OUT — you hear music or calls privately. That's OUTPUT!

Television: Shows pictures & plays sound — a big OUTPUT device at home!

Smart Speaker: Alexa / Google Home plays music & talks back — that's OUTPUT!

Any time a machine gives information BACK to you — with sound, light or a picture — that is OUTPUT!

4. Practice Activities

Activity 1: Is It INPUT or OUTPUT?

Read each device name below with your child. Ask them: "Is this INPUT or OUTPUT?" Let them answer first, then check together!

Device	Type	Why?
Keyboard	INPUT	It sends typing TO the computer
Monitor	OUTPUT	It shows information FROM the computer
Microphone	INPUT	It sends voice TO the computer
Speakers	OUTPUT	They play sounds FROM the computer
Camera	INPUT	It sends pictures TO the computer
Printer	OUTPUT	It prints information FROM the computer
Mouse	INPUT	It sends clicks & movement TO the computer
Headphones	OUTPUT	They play sound FROM the computer
TV Remote	INPUT	It sends commands TO the TV
Television	OUTPUT	It shows pictures FROM a device

Activity 2: The Conversation Game

Play this game with your child to reinforce the concept:

- 1 You say a device name (e.g., "Keyboard!")
- 2 Your child shouts "INPUT!" or "OUTPUT!"
- 3 Ask them: "Why?" — they explain the reason
- 4 Switch roles! Let your child name devices for you to answer
- 5 Try naming devices from around the house (remote, TV, headphones...)

+P Tip for Parents: Repetition is key! Quiz your child during the week — at meals, in the car, or before bedtime.

5. Homework Tasks

Help your child complete these tasks before the next session

Task 1: Sort the Devices

Make two columns on paper and write each device under the correct column:

INPUT

- Keyboard
- Mouse
- Microphone
- Camera

OUTPUT

- Monitor
- Speakers
- Printer

(Answers are shown above for parent reference — cover them when working with your child!)

Task 2: Draw & Label

Ask your child to:

- Draw their computer setup at home (monitor, keyboard, mouse, speakers, etc.)
- Label each part as INPUT or OUTPUT
- Use different colors for input devices and output devices

Bonus Star: If your child can name 3 input AND 3 output devices from memory!

Coming Up Next...

Session 3: How does a computer THINK? We will learn about the CPU and Memory!

Tips for Parents

- ' Point out input and output devices as you see them around the house during the week.
- ' When your child uses a tablet, phone, or TV — ask them "Is that input or output?"
- ' Praise effort and encourage curiosity — there are no wrong questions!
- ' Practice the vocabulary: Input, Output, Keyboard, Mouse, Monitor, Speakers, Printer, Microphone, Camera.
- ' Make it a game: who can spot more input/output devices in one room?
